SUMMARY

Full Stack Developer who builds and ships real, production-ready web applications. Skilled in designing scalable backend architectures, REST APIs, and real-time systems using the MERN stack and Next.js. Passionate about solving real problems through clean code, end-to-end project ownership, and performance-driven development.

EDUCATION

B.E. in Information Technology, LDRP-ITR · July 2023 — Present · CGPA: 6.63

Higher Secondary Certificate (HSC) in School Certificate, Dream International School (Percentage: 61.11)

PROJECTS

Cravinoz - Full-Stack Food Ordering Application | GitHub | Live

- Built and deployed a production-ready full-stack food ordering platform end-to-end using Next.js, TypeScript, Node.js/Express, and MongoDB, with clean frontend/backend separation live on Vercel.
- Engineered a real-time order tracking system with 6 status stages (Pending → Baking → Delivered), 5-second polling, and per-stage timestamps that auto-update on the customer's screen within seconds of admin action.
- Implemented JWT-based authentication with separate user and admin roles, SMTP email verification, and role-guarded REST API routes — applying real-world security patterns across the entire backend.
- Designed 20+ documented REST API endpoints with a live admin dashboard for order management, full API reference docs, and integration guides — owning the product from architecture to deployment.

MockMate – AI-Powered Interview Platform | GitHub

- Architected an AI-powered full-stack interview platform with real-time WebSockets and role-based access control.
- Integrated AI APIs for dynamic question generation and automated response evaluation with instant feedback.
- Designed scalable REST APIs and optimized MongoDB schemas to support real-time interview session handling.
- Implemented proctoring features including tab-switch detection and computer vision monitoring for exam integrity.

NearNow – Location-Based E-commerce Platform | GitHub

- Developed NearNow, a location-based e-commerce platform using the MERN stack (MongoDB, Express.js, React.js, Node.js) that connects users with nearby shops and products in real time using the Geolocation API and Google Maps API.
- Built a location-aware search system that queries MongoDB using geospatial filters to surface only products and vendors within the user's proximity, reducing irrelevant results and improving discovery speed.
- Implemented JWT-based authentication with role-separated flows for customers and vendors, including a vendor dashboard for shop registration, product listing, and inventory management.
- Managed global application state using Redux and designed a fully responsive UI in React.js, ensuring consistent experience across devices with efficient data flow between frontend and REST API backend.

EXPERIENCE

Python Intern - Oasis Infobyte

May '25 — June '25

- Developed modular Python scripts to automate structured data processing using core data structures
- Built reusable Python modules handling datasets via file I/O, lists, and dictionaries following clean code principles
- Wrote well-documented, production-style Python code applying OOP principles and best practices

SKILLS

Languages: JavaScript, TypeScript, Python, Java, C++

Frontend: React.js, Next.js, Redux, HTML5, CSS3

Backend: Node.js, Express.js, REST APIs, WebSockets, JWT Authentication

Databases: MongoDB, MongoDB Atlas, PostgreSQL, SQL

Cloud & DevOps: Docker, Vercel, Netlify, Render, Cloudinary

Tools: Git, GitHub, Postman, VS Code, MongoDB Compass

Soft Skills: Problem-Solving, Self-Driven, Project Ownership, Attention to Detail, Adaptability, Team Collaboration

ACHIEVEMENTS

- NPTEL Certified in Programming in Java
- Completed **Delta** – Full Stack Web Development, **Apna College** (MERN Stack, REST APIs, Deployment)

Declaration:- I hereby declare that the above information is true and correct to the best of my knowledge and belief.
